

Figure 1: Inhibitory effects of DNK 333 on 5-HTP – stimulated overactive urinary bladder responses in the conscious guinea-pig.

(Mean \pm SEM, # $P < 0.05$ vs. control, * $P < 0.05$ vs. 5-HTP, RM ANOVA post-hoc Tukey, n = number of animals)

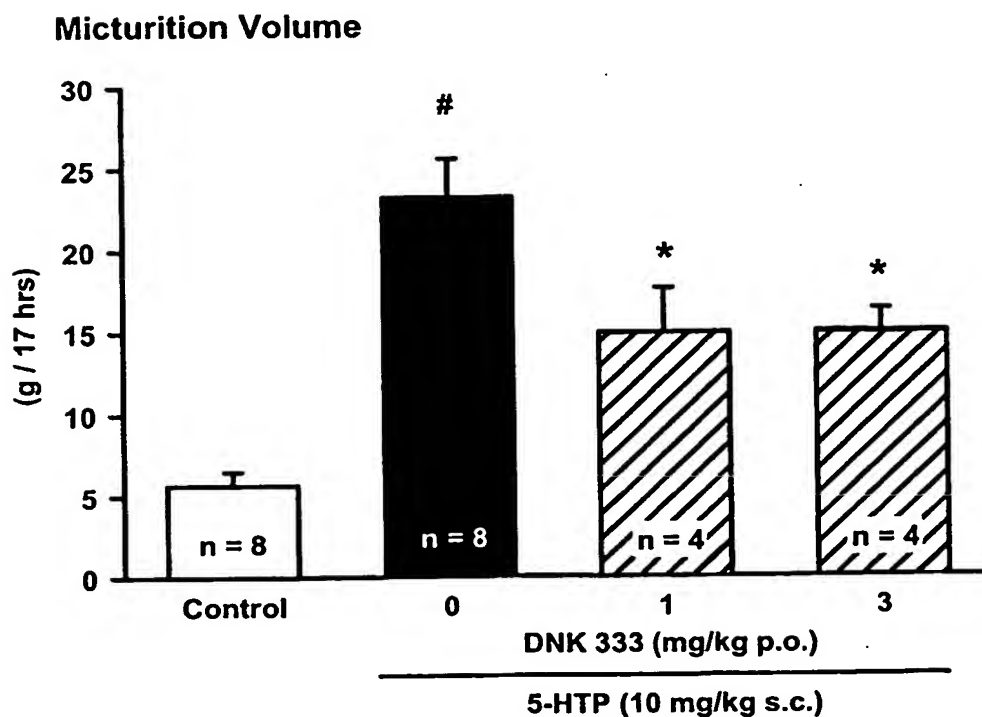

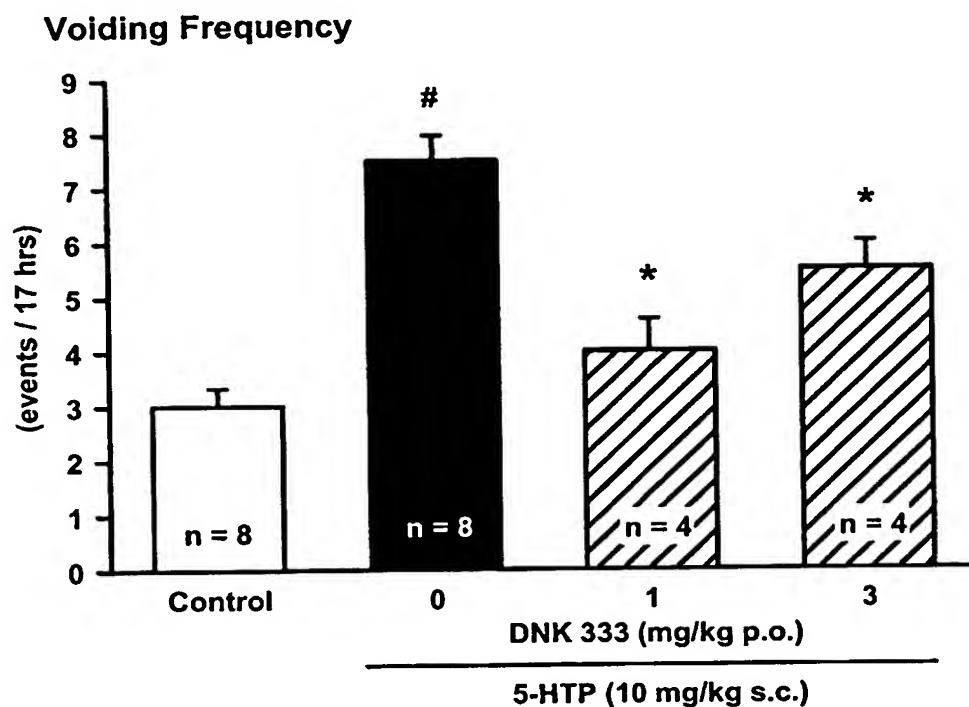

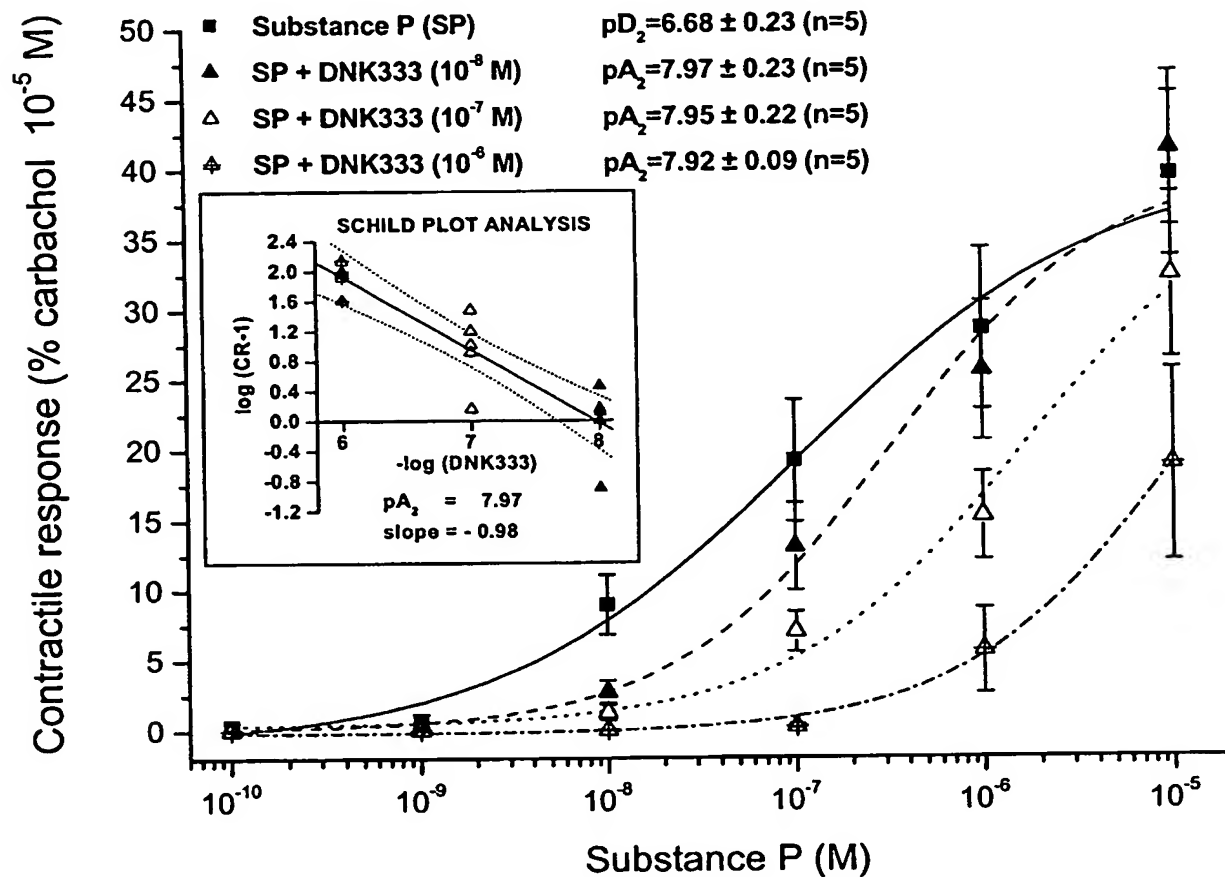

Figure 2: Inhibitory effects of DNK 333 on substance P – stimulated detrusor contractility in longitudinal muscle-nerve preparations from the guinea-pig urinary bladder.

(Mean \pm SEM, n = number of preparations)
